KeyMouse automatically detects and treats keyboard shortcuts as mouse clicks, allowing you to perform advanced keyboard and mouse functions, even when the cursor is not on the keyboard. To activate this utility, open any application that uses keyboard shortcuts. KeyMouse then opens a floating window that you can position on your desktop. At this point, KeyMouse becomes the active window. You can then assign hotkeys to any combination of mouse buttons and modifiers for your own custom shortcuts. Once the shortcuts are defined, you can use them to perform a variety of tasks, such as select a whole word, select a contiguous range of text, or copy/paste text. For instance, to select the word "open" and paste it into a newly opened Notepad document, you can press the Ctrl+Alt+Shift+O key combination. The program is lightweight and intuitive to use, and allows you to control multiple keyboards and mouse devices. However, this utility's feature set is quite limited. KBatchExec is a simple command line tool that allows you to launch, run and terminate a batch of programs. It's very useful for people that run a large number of similar processes. The first page that KBatchExec displays shows you the programs that will be run, and their order. For instance, you can select the "C:\Demo\Calc.exe" program to be run first, followed by "C:\Demo\Mail\send.exe", "C:\Demo\FileZilla\FileZil.exe" and so on. To launch a batch of programs, select the Run button, as shown in the figure above. The settings for the programs are then highlighted and you can select the "do not launch the shortcut", "do not launch the shortcut if already running", or "set the program shortcut location". You can also select the option to "launch the program directly" and type in the name of the program on the second page. To exit the program, press the X button and the programs will be terminated. The maximum number of items that can be run is 5 and each item can be launched independently. You can run more than one program in the same process, for instance, to open a file, launch a calculator and send an email at the same time. This utility provides you with an easy way to keep track of all of the programs that you run, and that's the main benefit of using this tool. However, KBatchExec is quite simple and there is 81e310abbf

What's New in the BatteryMon?

AcerTray is a program designed to conveniently place system gadgets in your system's system tray. This can be done through the main window or by selecting an icon from the tray area. The latter allows you to add more icons by simply pressing the + button and clicking on the necessary window. Once this is done, you can move or close icons and add icons to the tray. You can also remove icons from the tray area. The app supports adding a system gadget via the registry or by placing files on the system's path. Additional features: AcerTray supports a plethora of icons types: system, native and shell. To add an icon, simply choose the icon you want from the tray area. The mini window allows you to select icons by name, size, folder or by searching for an icon. It is also possible to pin the gadget to the system tray. There is a basic help file that explains how to use the app. The app requires quite a lot of system resources, so you should be aware of that before installing it. Performance: AcerTray is a convenient tool for managing system gadgets. It can operate both in stand-alone mode and in the context of Windows. AcerTray's interface is simplistic. It has two main windows: the main window and the tray window. The main window lets you change settings and place icons on the tray area. The tray window shows the gadgets that are currently loaded, and can be used to select an icon. The add/remove icons feature seems not to be fully functional. The app can only add icons to the tray that are already in use. Thus, you cannot add icons that are not currently present. Also, you cannot remove or add gadgets via the main window. To conclude, AcerTray has a basic interface that can be used for both data input and output. It is a good tool for beginners and non-experienced users. BatteryMon is a straightforward program that reveals various monitoring information on your notebook's battery. It can be handled by all types of users. After a brief installation procedure, you are greeted by a standard window with a simple layout, representing BatteryMon's interface. So, you can check out battery details regarding the power source, status, remaining energy and time, total time and time on battery, along with the capacity, capacity drop and charge rate. Additional battery information is available through the Info menu, including device name, serial number, design capacity, charge cycles, voltage, critical bias and alert levels. It is also possible to view system power information and a battery graph, read a log file, as well as switch to mini mode. Plenty of configuration options are available for this utility. For instance, you can create an icon in the system tray area.
